

- Led software -

- Create - Organise - Plan -

Create, organise and plan all your content with our Led software. Using Firefox, Chrome, safari or Internet explorer will allow you to connect and manage your led screen from anywhere.

- **All included:** weather forecast, news, RSS, traffic...as well as various content templates ready to use.
- **Plan:** organize your messages throughout the week and choose the viewing time. You can plan your playlists in advance.
- **Control:** set up your account and choose between different levels of access. This software is also designed for monitoring one to several led screens. You will be able to display your playlists on one or various led screens at the same time. This option allows you to manage your led screen(s) really easily.
- **Share :** you can divide your led screen window in different areas which allows you to display different information within the same window. Example: you can display the weather forecast and a video at the same time.
- **Various File formats available:** text, jpeg, png, pdf, flash, animated gif, web page, vidéo (all formats).

LED DISPLAY

All included

Weather forecast, clock, news, traffic

Various features such as

Templates included, playlists, customised formats, animations

Easy to use

Plan and manage your led screen from your computer, laptop or touchpad. Connection from anywhere.

Different levels of control

Manage your led screen content (playlist, calendar...) from your account. You can also allow your partners and customers to log on their account in order to create their playlist. Indeed, different levels of control are available.

Made in France

Software made and developed in France.
